Developed
in Ticino

Compatible with:

- ✓ 1st and 2nd generation digital tachographs, Smart 2 included
- ✓ Windows 10 and 11
- ✓ A single PC or several networked workstations
- ✓ USB smart card readers (PC/SC)
- ✓ Download keys that produce .DDD files
- ✓ 1st and 2nd generation driver cards

Built for OLR 1: downloads, the Art. 16 register, backup copies and three-year retention.

Driver cards via the reader, vehicle units via the download key, with the original files kept intact

Infringements graded by severity: driving, breaks, rest, working time, driving without a card

Reminders for downloads, licences, CZV/OACP certificates, medical checks, vehicle tests and calibrations

Remaining driving and working time for each driver, before assigning the next trip

Weekly Art. 16 register and inspection file, ready to be signed

Several workstations on the same archive, with automatic backups

How does TachoGest work?

Insert the driver card into the reader, or connect the download key used for your vehicles. TachoGest recognises each file, assigns it to the right driver or vehicle and keeps the original intact, with its digital fingerprint. It then checks driving, breaks, rest periods and working time against OLR 1, updates the deadlines and prepares the documents: weekly register, inspection file, warning letters and eighteen PDF reports. The archive stays on your office PC or in a network folder, with automatic backups.
