PARTNERS

Our company

SecurData is an IT company operating in the software development and IT security sector, with a particular focus on data protection and physical and logical access control systems.

Our mission is the design and implementation of mobile and web-based applications dedicated to municipalities and companies of various sizes. We are capable of creating customized solutions that facilitate institutional activities and enhance business performance.

In the field of security, we offer a wide range of high-quality products. Our services include the production and distribution of company badges, RFID tags, authentication tokens, both contact and contactless card readers, and biometric readers.

We actively promote the implementation of advanced solutions characterized by a high technological component, capable of effectively enhancing the level of security of company digital resources.

SecurData is the exclusive distributor of reference for major multinational companies such as Identiv (Nasdaq INVE), HID Global, Suprema, and Reiner SCT GmbH.

We are ready to work alongside you to provide innovative software solutions and protect your digital assets.

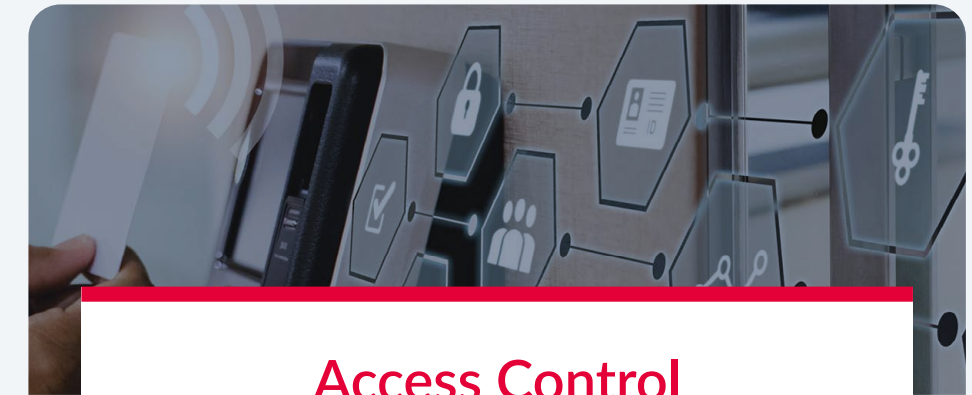

Data Protection

Data protection consulting for compliance with the LPD and OPDA

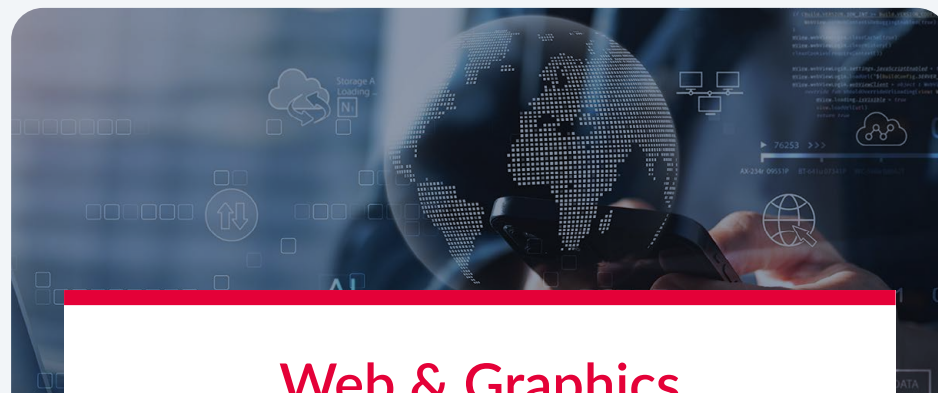

Cyber Security

Cybersecurity solutions for the security of your data and information systems

Access Control

Security systems for physical and logical access with badges, biometrics, and mobile Bluetooth

Web & Graphics

Graphics, brand identity, video, websites, and printing of company badges

Software & AI Solutions

Software solutions with mobile applications and the use of AI

Card Readers & RFID

Distribution of personalized cards and readers for chip cards, RFID, NFC, and biometric

We design and implement solutions that are secure, scalable, and reliable.

From the **identification of people and objects** to the **security of corporate networks**, from **communicating with citizens** through communication platforms to **monitoring traffic and large parking areas**.

We are committed to **providing high-quality, scalable, secure, and sustainable solutions** that enhance experiences and data to **optimize processes and activities in both public and private sectors**, making them more efficient, secure, and sustainable.

Our **passion** for our work, combined with our **specific expertise**, allows us to enthusiastically and proactively address the various needs presented to us.

Tackling the complexity of future challenges through the use of AI

The world is becoming increasingly digital. Advanced technologies provide us with the opportunity to acquire and analyze large volumes of data to optimize processes and services, effectively addressing the challenges of the future.

We utilize artificial intelligence (AI) to support businesses and public administrations in the digital transformation process, which involves analyzing, enriching, and interpreting data of interest.

Our multidisciplinary approach allows us to apply AI in various sectors, including user interaction through bots, real-time and predictive analysis of traffic flows for proper traffic planning and territorial planning, monitoring of large parking areas from a statistical and management perspective, as well as security (e.g., ground personnel, fire, gatherings), and document analysis (analyzing documents and paper archives to identify unstructured records or relevant data).

Cyber Security SOC NOC CLOUD

Our advanced Security Operations Center (SOC), strategically located in Switzerland. This choice is not random; Switzerland is globally renowned for its stability, security, and rigorous privacy standards, values that we embody and guarantee through our services.

Our SOC represents the flagship of our cybersecurity offering. Equipped with the most advanced technologies and overseen by a team of highly qualified experts, our SOC operates 24/7 to monitor, assess, and react to any cybersecurity threat in real-time. Its location in Switzerland allows us to benefit from favorable legislation regarding data protection and cybersecurity, thus offering an unparalleled level of service and protection.

Distinctive features of our SOC include:

Cutting-Edge Technology: We utilize state-of-the-art cybersecurity solutions, integrated with artificial intelligence and machine learning, to ensure proactive and real-time protection. Our team consists of international experts with years of experience in the field of proactive cybersecurity.

Privacy and Compliance: Being based in Switzerland, we adhere to the highest standards of data privacy and security, ensuring compliance with the strictest global and local regulations.

Global Scalability: Despite having our SOC in Switzerland, our infrastructure and expertise allow us to replicate our security model anywhere in the world, providing the same quality of service and protection.

In addition to our SOC, we also offer Network Operations Center (NOC) management services and Cloud infrastructure, ensuring an optimal approach to managing your cybersecurity. This allows us to provide you with a comprehensive solution that not only protects your company from cyber threats but also optimizes the performance and resilience of your IT infrastructure. We can replicate our infrastructure where there is a specific need.
